

Your company knowledge works with you

AI Company Memory turns scattered company knowledge into ready working context: instantly available, interpretable and analysable. AI agents research and answer on behalf of your people.

80 % less onboarding time

New project members are productive in hours, where it used to take days.

Example: Developer onboarding in a client project

Before: Project history, client agreements and architecture decisions are scattered across many systems. Anyone starting fresh loses days searching and checking back with the team.

With AI Company Memory: An AI agent pulls the answers together from all systems, with source references and only from content the requesting person is cleared to see.

Agent-first

AI agents resolve **complex, cross-system questions** on behalf of your people. Research and coordination that would otherwise run through several teams for days shrink to minutes.
