

CASE STUDY · AI SUPPORT COPILOT

Customer support that answers by the facts

AI Support Copilot answers incoming support tickets automatically and true to the facts, across 20 languages and around 50 SaaS products. In copilot mode, a human approves every reply.

94 %

answer quality

Verified hit rate of the AI answers across selected product categories.

 Example: niche product with a thin knowledge base

Before: Many niche products have almost no public knowledge. Off-the-shelf AI guesses and hallucinates, and the team pulls every detail together by hand from datasheets.

With AI Support Copilot: the system pulls the exact facts from the product datasheets and drafts a sourced answer in the customer's language. Only from the stored sources.

 True to the facts

A self-learning knowledge base combines semantic similarity search with the exact facts from the datasheets. So the system answers **by the facts** rather than just sounding plausible.

 Coverage at a glance

20 languages

30 countries

50+ SaaS products

extreme niches

Fact-based and controlled: locally hosted open-source AI models, no US hyperscalers · in copilot mode every answer is approved by a human · answers strictly by the facts, firm rules against hallucination.
